TUNABLE WHITE LED PANEL V3

CCT SELECTABLE | DIMMABLE

3 Years

Lifetime
50 000 hours

IP54
Suitable for use in damp locations

0-10V /
RF Control System
Dimmable

120-277VAC
Versions Only

E480477

SPECIFICATIONS

RF 2.4GHz Control System

Easily Select Between Color Temperatures:
3000K - 5000K

Dimmable via RF Control System (No Wires)

Compatible with 0-10V Dimming

External Driver for Easy Access

Robust Aluminium & Mild Steel Casing

Beam Angle: 120°

Colour Rendering Index: >80

Functioning Temperature: -20°C to 45°C

AVAILABILITY

1ft x 4ft / 2ft x 2ft / 2ft x 4ft

120-277Vac

Suspension Kit (PL-AC-S)

Surface-Mount Kit (PLxx-AC-M-V2)

Recessed Drywall Kit (PLxx-AC-RC-V2)

Remote (PL-V3-REMOTE)

ORDERING INFORMATION

ATTENTION
These LED panels must always be installed with a regular wall switch and be turned off and on every few days to maintain the panel programming and strength of the wireless connection.
The wireless remote is not a substitute for a regular wall switch.
To set up multiple zones, LED panels must be on different circuits, or otherwise be able to be turned off independently by zone.

Legrand RH4FBL3PW 0-10V Dimmer	No	-
Legrand WS4FBL3PW 0-10V Dimmer	No	-
Legrand H4FBL3PTC 0-10V Dimmer	No	-

WIRELESS REMOTE

IMPORTANT

To set up multiple zones, LED Panels must be on different circuits, or otherwise be able to be turned off independently by zone.

<div>ON OFF</div>	<div>ON Turn on OFF Turn Off</div> <p>It is recommended to use the remote in conjunction with wall switches.</p>
<div>ID</div>	Identify Remote to Panels Hold down the 'ID' button then power the LED panels you wish to pair with the remote. Release the 'ID' button once the LED Panel blinks twice. The remote is now paired with the panels.
<div>ID + ▼</div>	Unpair from Panels Hold the button ID + ▼ together, then turn on the LED Panels. The LED panels will blink. Release the buttons to finish unpairing the remote.
<div>1 2 3 4</div>	Set Up/Select Zones Remote must first be identified to all panels. Power off the LED Panels. Hold down a zone number button, power the LED Panels for that zone, and release the zone number button once the panels blink once.
<div>SAVE</div>	Saving the Current Configuration Hold down the button SAVE until the light goes out to save the current brightness and color temperature. The Panel will turn at the current configuration even if they were turned off or the power was cut.
<div>ALL</div>	Select All Zones
<div>5000K 4000K</div>	<div>3500K 3000K</div>
<div>25% 50%</div>	<div>75% 100%</div>
<div>▲ ▼</div>	<div>◀ ▶</div>
Increase Brightness Decrease Brightness	Increase Color Temperature Decrease Color Temperature

When turned on, the LED Panels automatically detect any 0-10V dimmer setting to determine the brightness. It will default to 100% brightness if there is no dimmer input.

If a 0-10V dimmer is used, the light brightness will use the 0-10V dimmer's brightness setting.

If the remote controller is used, the light brightness will only change relative to its current brightness.
